

Ingress Protection You Can Rely On.

IP5X Dust Exclusion Control
Cabinet

IP5X Rated Control Cabinet, keep the heart of your machine healthy.

Dust Matters. Dust ingress can have a dramatic impact on the performance of any electronic devices over time. In addition to sealing the control cabinet from the outside, air circulation within the cabinet is improved.

By replacing the existing aspiration system with heat exchangers and fans and by adding internal stirrer fans, excess heat within the system is more efficiently displaced.

Vital electronic components are given a greater level of protection keeping them in pristine condition; extending the life of your machine.

*Available to existing SORTEX Z+V and SORTEX Z+Vx customers with 2 or more modules per sorter. Field upgradable.

Key Features and Benefits:

- Dramatically reduces ingress to machine internals – reducing risk of damage
- Cleaner circuit boards deliver improved reliability
- Fewer cleaning requirements reduce downtime, maintenance costs and increases capacity potential
- Reduced cost consumables; no more dust filters
- No more board failures due to ingress

Buildup of dust on crucial internal parts can have a major impact on overall performance
