

UniLine Series Brochure\_Global Events

## UniLine series End to end rice processing

### Fast, economic, reliable

Speed is the name of the game in today's hyper-competitive market, and the rice processing industry is undergoing a rapid transformational shift as a result of changing customer requirements. Customers now want solutions that are not only competitive but also timely and fast to execute. This is why Bühler launched its UniLine series – a breakthrough innovation for the rice milling industry, and an ideal solution for greenfield investments. 'Uni' means 'one' in Latin, because with its industry-leading end-to-end solutions Bühler is the only provider you'll need.

#### Design Basis Parameters

Available versions (paddy input capacity in TPH)  
Paddy Type  
Process Type  
Plant Operation (hrs/ day)  
Capacity with integrated pre-cleaning (TPH)  
Installed electrical load (kW)  
Land requirements (acres)

#### Specifications

2.0, 4.0, 5.0, 8.0,10.0  
Long / Medium  
Raw / Steam / Parboiled  
20  
5  
365  
1.5-2

### What does UniLine offer?

UniLine offers a host of features and benefits that make it a winner compared to currently market alternatives.

- **Standardized package:** UniLine is the perfect solution for customers looking for standardized packages from cleaning to bagging – meaning low costs and fast project execution time.
- **End-to-end scope:** As a complete solution provider, Bühler doesn't just offer rice milling but the full scope of plant execution – everything from pre-cleaning and parboiling to the latest automation solutions.
- **Hassle-free solutions:** Straightforward and fully streamlined – no more dealing multiple suppliers and contractors
- **Simplified civil work:** Prefabricated structures and a plain foundation without multiple floors or openings means far quicker installation time and less specialized skill requirements.

Up to 40%  
reduction in  
footprint

Up to 45% cost  
reduction vs  
regular execution

Up to 15%  
energy savings

Up to 35%  
reduction in  
project execution  
time
