Replaying process visualization
Replay

Replay optimizes and protects your business with a full digital production history.

Easy remote access for customers and Bühler

Replay – the media player for production processes. Root cause analysis of previous issues is just one click away. Processes can continuously be improved and problems sustainably eliminated.

Maximum process traceability

All historical data of the process visualization can be checked at any time with just a few clicks. Compared to log lists and reports in a plant control system, the history of all machines is displayed visually. This makes a root cause analysis very efficient.

Expedited troubleshooting

Replay allows you to review past production data in in a convenient, visual manner. This allows you to quickly identify issues to improve plant availability and points for new ways for analyzing production efficiency
