

Process Optimization.
Analysis of your ovens, roasters and dryers heating profile and core temperature.

Optimize your production processes. Trust in the market leader's experience.

Together we can exploit your full production potential. We identify possible issues and untapped resources. Issues will be analyzed to determine their root cause and to define and evaluate further actions towards higher output.

Scope of delivery

This service contains a heating measurement system, a detailed analysis and recommendations for further productivity increase.

On-site assessment of thermal processing systems by an expert measurement

A detailed heating profile analysis combined with a machine and safety inspection.

Evaluation and documentation of findings

Encompassing factors such as heat distribution, convection heat, radiant heat and energy levels.

Detailed report and action proposal

Including all findings, their impacts and recommended actions for improvements.

Your benefits

External and independent review of the thermal system condition

Including a detailed statement about actions and costs for possible improvements.

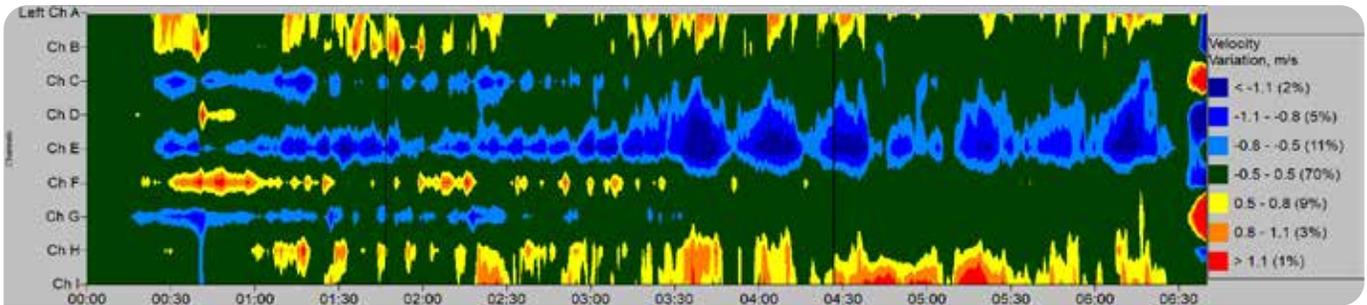

Comprehensive, detailed heating profile analysis

An examination of all factors relevant to baking, showing potential for improvements and thus increased production.

Action plan and heating profile based on your needs

To help you decide on how to optimize and adjust the heating process, thus lowering production cost and CO₂ emission.
