Machines & Process Technology in Feed Manufacturing

Changzhou, China

This workshop focuses on the practical aspects of machines and process technology, regarding productivity. This includes accuracy and homogeneity, hygiene, quality and energy consumption as well as cost savings. This enables you to understand the various processes in feed mills (including pre-mix and compound feed).

Course content

Aspiration system

Basics, systematic techniques of designing calculations.

Feedmill process leverage

Plant layouts, various processes for targeted product.

Particle size reduction

Proper grinding system setups for final products, targeted particle size management and efficiency improvements.

Proportioning & mixing

Accuracy, homogeneity test and liquid application techniques.

Hygienization

Thermal process design and operation management.

Compacting

Pelleting, expanding and extrusion in feed manufacturing.

Drying/Cooling

Basics, efficiency improvement and energy cost saving.

Operation

Basic principles of operation, corresponding specific equipment and process.

Continuous improvement

Analytical methods and result evaluation.

Workshop

Various practices on key pieces of equipment.
