

BöhlerVision is an innovative remote service and maintenance solution powered by the latest smart glass technology and augmented reality software. It connects Böhler experts and customers remotely helping to significantly speed up reaction times and reduce travel time and costs.

The remote expert can see exactly what the person on-site is seeing and as a result is able to provide instant, targeted

feedback and instructions using video, audio, text, markers and document sharing. The person on-site can get all this while being completely hands free and fully able to complete the desired tasks to resolve the issue at hand.

BöhlerVision Remote Assistance can be quickly deployed on premises or in the cloud. Except for network connectivity, no further software or hardware is required.

Smart Technology

- Rugged head-mounted wearable Android-class tablet computer
- Hands-free, voice controlled
- Real-time remote assistance
- Video & audio transmission
- Document exchange
- Remote augmented reality and video capable
- Video library enhanced

Benefits
